## 1 EXECUTIVE SUMMARY

### 1.1 Overview

1.1.1 Right of Light Consulting has been commissioned by London Borough of Camden to undertake a daylight and sunlight study of the proposed development at Tybalds Estate, Orde Hall Street, Camden, London WC1N 3JT.
1.1.2 The study is based on the various numerical tests laid down in the Building Research Establishment (BRE) guide 'Site Layout Planning for Daylight and Sunlight: a guide to good practice, $2^{\text {nd }}$ Edition' by P J Littlefair 2011.
1.1.3 The aim of the study is to assess the impact of the development on the light receivable by the neighbouring properties at $2,4,6,6 a, 8,10,18,20,22,24,26,28$ \& 29 Orde Hall Street, 29, 31 to 35,37 to $39,41 \& 43,51,53,55,57,59 \& 61$ Great Ormond Street, 1 \& 2 Barbon Close, 37 Queen Square, 20 to 25 \& 26 to 27 Boswell Street, 1 to 62 Boswell House, 1 to 56 Babington Court, 1 to 56 Chancellors Court, 2 to 6 Boswell Court, 12 New North Street, 1 to 50 Blemundsbury, 1 to 42 Falcon, 1 to 28 Richbell, 1 to 14 Springwater, 98 \& 110 to 124 Theobalds Road, 1 to 42 Windmill and 9, 10 \& 11 Dombey Street.
1.1.4 The window key in Appendix 1 identifies the windows analysed in this study. Appendix 2 gives the numerical results of the various daylight and sunlight tests. Where room layouts are not known the daylight distribution test has not been undertaken.
1.1.5 The majority of the main habitable room windows and amenity areas tested meet or surpass the BRE numerical recommendations. Whilst some windows and gardens do not meet the recommendations, the results are not unusual in the context of an urban location. The BRE guide explains that the numerical guidelines should be interpreted flexibly, since natural lighting is only one of many factors in site layout design. The local authority should therefore balance daylight and sunlight considerations against all other material planning considerations when deciding whether to grant planning permission.

## 3 METHODOLOGY OF THE STUDY

### 3.1 Local Planning Policy

3.1.1 We understand that the Local Authority take the conventional approach of considering daylight and sunlight amenity with reference to the various numerical tests laid down in the Building Research Establishment (BRE) guide 'Site Layout Planning for Daylight and Sunlight: a guide to good practice, $2^{\text {nd }}$ Edition' by P J Littlefair 2011. A new European standard BS EN 17037 'Daylight in Buildings’ was published in May 2019. An update to the BRE guide to take into account the European standard is not anticipated until sometime in 2020. It is not yet clear, how and to what extent, the European recommendations will be adopted by the BRE and Local Authorities.
3.1.2 The standards set out in the BRE guide are intended to be used flexibly. The BRE guide states:
3.1.3 "The guide is intended for building designers and their clients, consultants and planning officials. The advice given here is not mandatory and the guide should not be seen as an instrument of planning policy; its aim is to help rather than constrain the designer. Although it gives numerical guidelines, these should be interpreted flexibly, since natural lighting is only one of many factors in site layout design."

### 3.2 National Planning Policy Framework

3.2.1 The BRE numerical guidelines should be considered in the context of the National Planning Policy Framework (NPPF), which stipulates that local planning authorities should take a flexible approach to daylight and sunlight to ensure the efficient use of land. The NPPF states:
3.2.2 "Local planning authorities should refuse applications which they consider fail to make efficient use of land, taking into account the policies in this Framework. In this context, when considering applications for housing, authorities should take a flexible approach in applying policies or guidance relating to daylight and sunlight, where they would otherwise inhibit making efficient use of a site (as long as the resulting scheme would provide acceptable living standards)."

### 3.3 Daylight to Windows

3.3.1 Diffuse daylight is the light received from the sun which has been diffused through the sky. Even on a cloudy day, when the sun is not visible, a room will continue to be lit with light from the sky. This is diffuse daylight.
3.3.2 Diffuse daylight calculations should be undertaken to all rooms within domestic properties, where daylight is required, including living rooms, kitchens and bedrooms. The BRE guide states that windows to bathrooms, toilets, storerooms, circulation areas and garages need not be analysed. These room types are non-habitable and do not have a requirement for daylight.
3.3.3 The BRE guide states that the tests may also be applied to non-domestic buildings where there is a reasonable expectation of daylight. The BRE guide explains that this would normally include schools, hospitals, hotels and hostels, small workshops and some offices. The BRE guide is not explicit in terms of which types of offices it regards as having a requirement for daylight. However, it is widely accepted amongst consultants and local authorities, that for planning purposes, offices (which are commercial in nature) do not have a requirement for daylight. The point is touched on in the 'Daylighting and Sunlighting' guidance note published by the Royal Institution of Chartered Surveyors (RICS), which gives guidance to surveyors on how to produce their reports:
3.3.4 "The report should establish the limits of the assessment. For example, existing commercial premises are rarely assessed for loss of amenity."
3.3.5 The BRE guide contains two tests which measure diffuse daylight:

### 3.3.6 Test 1 Vertical Sky Component

The Vertical Sky Component is a measure of available skylight at a given point on a vertical plane. The BRE guide states that the total amount of skylight can be calculated by finding the Vertical Sky Component at the centre of each main window. The BRE guide does not define the term 'main window'. However, in our opinion, where a room has multiple windows, the largest window is usually taken as the main window and the smaller window(s) as secondary. Although we generally follow the practice of testing all windows, including secondary windows, our interpretation of the

BRE guide is that the Vertical Sky Component targets do not apply to secondary windows.

### 3.3.7 Test 2 Daylight Distribution

The distribution of daylight within a room can be calculated by plotting the 'no sky line'. The no sky line is a line which separates areas of the working plane that do and do not have a direct view of the sky. Daylight may be adversely affected if, after the development, the area of the working plane in a room which can receive direct skylight is reduced to less than 0.8 times its former value.
3.3.8 The BRE guide states that both the total amount of skylight (Vertical Sky Component) and its distribution within the building (Daylight Distribution) are important. The BRE guide states that where room layouts are known, the impact on the daylighting distribution can be found by plotting the 'no sky line' in each of the main rooms. Therefore, we are of the opinion that application of the test is not a requirement of the BRE guide where room layouts are not known. We don't endorse the practice of applying the test based on assumed room layouts, because the test is very sensitive to the size and layout of the room and the results are likely to be misleading. However, we can provide additional daylight distribution data upon request by the local authority, if neighbouring room layout information is confirmed.

### 3.4 Sunlight availability to Windows

3.4.1 The BRE sunlight tests should be applied to all main living rooms and conservatories which have a window which faces within 90 degrees of due south. The guide states that kitchens and bedrooms are less important, although care should be taken not to block too much sunlight. The tests should also be applied to non-domestic buildings where there is a particular requirement for sunlight.
3.4.2 The test is intended to be applied to main windows which face within 90 degrees of due south. However, the BRE guide explains that if the main window faces within 90 degrees due north, but a secondary window faces within 90 degrees due south, sunlight to the secondary window should be checked. For completeness, we have tested all windows which face within 90 degrees of due south. The BRE guide states that sunlight availability may be adversely affected if the centre of the window:

- receives less than $25 \%$ of annual probable sunlight hours, or less than $5 \%$ of annual probable sunlight hours between 21 September and 21 March and
- receives less than 0.8 times its former sunlight hours during either period and
- has a reduction in sunlight received over the whole year greater than $4 \%$ of annual probable sunlight hours.

### 3.5 Overshadowing to Gardens and Open Spaces

3.5.1 The availability of sunlight should be checked for all open spaces where sunlight is required. This would normally include:

- Gardens, usually the main back garden of a house
- Parks and playing fields
- Children's playgrounds
- Outdoor swimming pools and paddling pools
- Sitting out areas, such as those between non-domestic buildings and in public squares
- Focal points for views such as a group of monuments or fountains.
3.5.2 One way to consider overshadowing is by preparing shadow plots. However, the BRE guide states that it must be borne in mind that nearly all structures will create areas of new shadow, and some degree of transient overshadowing is to be expected. Therefore, shadow plots are of limited use as interpretation of the plots is subjective. Shadow plots have not been undertaken as part of this study.
3.5.3 The BRE guide also contains an objective overshadowing test which has been adopted for the purpose of this study. This guide recommends that at least $50 \%$ of the area of each amenity space listed above should receive at least two hours of sunlight on 21 March. If as a result of new development an existing garden or amenity area does not meet the above, and the area which can receive two hours of sunlight on 21 March is less than 0.8 times its former value, then the loss of light is likely to be noticeable.

## 4 RESULTS OF THE STUDY

### 4.1 Windows \& Amenity Areas Considered

4.1.1 The aim of the study is to assess the impact of the development on the light receivable by the neighbouring properties at $2,4,6,6 a, 8,10,18,20,22,24,26,28$ \& 29 Orde Hall Street, 29, 31 to 35,37 to 39,41 \& 43, 51, 53, 55, 57, 59 \& 61 Great Ormond Street, 1 \& 2 Barbon Close, 37 Queen Square, 20 to 25 \& 26 to 27 Boswell Street, 1 to 62 Boswell House, 1 to 56 Babington Court, 1 to 56 Chancellors Court, 2 to 6 Boswell Court, 12 New North Street, 1 to 50 Blemundsbury, 1 to 42 Falcon, 1 to 28 Richbell, 1 to 14 Springwater, 98 \& 110 to 124 Theobalds Road, 1 to 42 Windmill and 9, 10 \& 11 Dombey Street.
4.1.2 Appendix 1 provides a plan and photographs to indicate the positions of the windows and outdoor amenity areas analysed in this study. Appendix 2 lists the detailed numerical daylight and sunlight test results.
4.1.3 To gain an understanding of the neighbouring properties and in particular, their room uses, we have conducted multiple inspections of the surrounding neighbouring properties from the site itself and reviewed historical aerial photography. We have also reviewed and (where applicable) utilised historical property plans for the purpose of the assessment. We are therefore confident that the information sourced/utilised represents the current arrangement of the surrounding neighbouring properties.

### 4.2 Daylight to Windows

### 4.2.1 Vertical Sky Component

4.2.2 All main habitable room windows tested meet or surpass the standard BRE Vertical Sky Component (VSC) target with the exception of 165 windows (see window results highlighted in green ( 79 windows), yellow ( 82 windows) and red ( 4 window) in Appendix 2). Where windows do not meet the standard BRE targets it does not automatically follow that daylight will be adversely affected. When interpreting the numerical data it is necessary to have regard to factors such as the use of the rooms, whether or not windows are sited close to the boundary and the existing site conditions. The following are mitigating factors of importance:
4.2.3 Firstly, the analysis confirms that 72 windows that do not achieve an ideal standard of daylight fall only marginally short of the VSC target (windows achieve a reduction ratio of 0.7 and above against the target of 0.8 ).
4.2.4 Secondly, the analysis confirms that a further 7 of the windows that do not achieve an ideal standard of daylight serve small kitchens. We note that the local authority at Camden do not consider small kitchens (under 13m2) as habitable rooms within domestic properties.
4.2.5 Following the above, we are of the opinion that the aforementioned 79 VSC scores (all highlighted in green in Appendix 2) in this case are acceptable.
4.2.6 The results confirm that windows highlighted in yellow that fall short of the standard VSC targets are already hampered by overhangs. The BRE guide acknowledges that existing windows with overhangs above them typically receive less daylight. This is because the overhang cuts out light from the top part of the sky. Therefore, even a modest obstruction opposite may result in a large relative impact on the VSC. The guide goes on to explain that an additional calculation may be carried out assuming that the overhangs do not exist. If the windows meet the targets on this basis then this confirms that it is the overhang that prevents the targets from being met as opposed to an unreasonable level of obstruction caused by the development. The majority of the windows which fall into this category pass the Vertical Sky Component test without the overhangs in place (see Appendix 3). The results also confirm that the windows which do not pass the test without the overhangs in place are marginal.
4.2.7 The results confirm that the remaining windows (highlighted in red) fall beyond a borderline shortfall and achieve reduction ratios of 0.65 and above (against the BRE recommendation of 0.8 ).
4.2.8 In summary, given the isolated shortfall in this instance (the 4 windows which achieve a VSC score of below the recommended ' $27 \%$ ' noted in the BRE guide and are also not hampered by an existing overhanging obstructions), we are of the opinion that the development is likely to be acceptable.

### 4.2.9 Daylight Distribution

4.2.10 Where room layouts have been sourced/identified, we have applied the Daylight Distribution test. The results confirm that 30 (out of 425 rooms tested) rooms fall short of the Daylight Distribution test (see results highlighted in bold in Appendix 2). The points made above in connection with the Vertical Sky Component daylight results (paragraph 4.2.3 to 4.2.6) apply equally to the Daylight Distribution results. Given the high level of compliance and the borderline nature of the majority of the shortfalls to habitable rooms, we are of the opinion that the proposed development has an acceptable impact on daylight distribution achievable by the neighbouring properties.

### 4.3 Sunlight to Windows

4.3.1 Refer to Appendix 2 for the sunlight results pertaining to the neighbouring properties. All windows tested meet or surpass the total annual sunlight hours test and the winter sunlight hours test with the exception of 35 widows (see results highlighted in bold in Appendix 2). Similarly to daylight, there are mitigating factors to mention in connection to direct sunlight:
4.3.2 Firstly, the direct sunlight hours targets stated in the BRE guide are only intended to be applied to main living room windows. From our external observations it appears that with the exception of 10 windows, none of the shortfalls serve a main living room.
4.3.3 Secondly, 19 of the shortfalls are fairly marginal (before/after ratios of 0.7 and above against the BRE target of 0.8 and/or are only $1 \%$ short of passing the test).
4.3.4 Finally, in urban locations it is very often not possible to achieve recommended levels of direct sunlight - particularly during the winter months. Given the isolated and borderline nature of the results, we are of the opinion that the development design has an acceptable impact on direct sunlight.

### 4.4 Overshadowing to Gardens and Open Spaces

4.4.1 The results of the overshadowing test show that sunlight availability after the development will remain unaffected for gardens 2 \& 3 , 5 to 10 and 15 (i.e. reduction ratios of 1.0). This is better than the BRE minimum requirement which permits sunlight to be reduced by up to 0.8 times. The sunlight availability to garden 4 at 1 to

28 Richbell will also satisfy the BRE recommendation and achieves sunlight to $56 \%$ of its area on 21 March (against the BRE target of $50 \%$ ).
4.4.2 The sunlight availability to garden 1 at 1 to 42 Windmill, gardens 11 to 14,16 \& 17 at 37 to $39,51,53,55,57$ Great Ormond Street and garden 18 at 29 Orde Hall Street will be reduced to less than 0.8 times its former value after the proposed development. However, we note that with the exception of garden 14 and 17, the existing sunlight availability at the aforementioned gardens is already low and therefore even a small reduction to the in absolute terms results in a lower than normal before/after ratio.

### 4.5 Conclusion

4.5.1 The majority of the main habitable room windows and amenity areas tested meet or surpass the BRE numerical recommendations. Whilst some windows and gardens do not meet the recommendations, the results are not unusual in the context of an urban location. The BRE guide explains that the numerical guidelines should be interpreted flexibly, since natural lighting is only one of many factors in site layout design. The local authority should therefore balance daylight and sunlight considerations against all other material planning considerations when deciding whether to grant planning permission.

## 5 CLARIFICATIONS

### 5.1 General

5.1.1 The report provided is solely for the use of the client and no liability to anyone else is accepted.
5.1.2 The study is limited to assessing daylight, sunlight and overshadowing to neighbouring properties as set out in section 2.2, 3.2 and 3.3 of the BRE Guide.
5.1.3 The study is based on the information listed in section 2 of this report and a site visit. We have not had access to neighbouring properties.
5.1.4 This study does not calculate the effects of trees and hedges on daylight, sunlight and overshadowing to gardens. The BRE guide states that it is usual to ignore the effect of existing trees.
5.1.5 The impact on solar panels is a material planning consideration. However, the BRE guide does not provide assessment criteria for this. The assessment of impact on any neighbouring solar panels is therefore beyond the scope of this report.
5.1.6 We have undertaken the study following the guidelines of the RICS publication "Surveying Safely". Where limited access or information is available, assumptions will have been made which may affect the conclusions reached in this report. For example, where neighbouring room uses are not known, we will either make an assumption regarding the use, or take the prudent approach of treating the use of the room as being used for domestic purposes. Therefore, the report may need to be updated if room uses are confirmed by the local authority or by the consultation responses.
5.1.7 This report is based upon and subject to the scope of work set out in Right of Light Consulting's quotation and standard terms and conditions.
