

How micro-consolidation hubs will work

1

Supply van arrives

A delivery vehicle reaches the parking bay with parcels and walking carts

2

Porters meet van

The porters meet the driver at the vehicle.

3

Carts assembled

Collapsible walking carts are unloaded from the van and assembled at the kerbside.

4

Routes assigned

A carton of pre-sorted parcels added to each walking cart at the rear of the van. Each porter follows a phone-based walking route.

5

Reload cycles

Porters return to the Anchor Point after ~2 hours to reload and begin the next route.

6

Pack down

Walking carts are packed down and the vans returned to the depot after completion.
